

Ball Valve Components: Manufacture, Coat & Finish

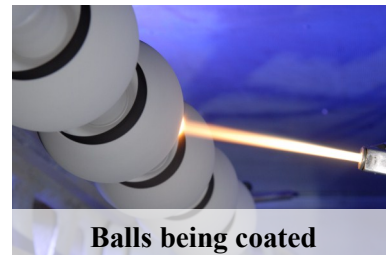

Watson Grinding & MFG has specialized in the manufacturing, coating and finishing of ball valve components for more than 5 decades.

We provide turn-key manufacturing of valve components from our expansive in-house production facilities.

Our specially designed carbide and/or ceramic thermal spray coatings are a valve industry standard. All of our coatings are applied robotically, using the Accuraspray Plume Sensor System, to insure consistently high quality coatings.

Watson Grinding is an industry leader in the finishing of ball valve balls for industrial applications. We can grind spherical components up to 53" OD.

Additionally, Watson Grinding has a fully equipped metallurgical laboratory which is tasked with maintaining quality standards while developing new, innovative solutions to suit specific application requirements.
